

an abstraction of the agent's beliefs, that is, a model of what the agent believes. This is the descriptive part of the research strategy. Among the most important properties of this model is an explicit representation of the deduction of the consequences of beliefs, and so we call the model one of Deductive Belief. Piotr J. Gmytrasiewicz, Edmund H. Durfee, A logic of knowledge and belief for recursive modeling: a preliminary report, Proceedings of the tenth national Authors - Cited By.

A Deduction Model Of Belief and Its Logics. A natural model of belief for robot agents is the deduction model: an agent is represented as having an initial set of beliefs about the world in some internal language and a deduction process for deriving some (but not necessarily all) logical consequences of these beliefs.
