In this paper we define the real Banach function algebras and extend some results in the real uniform algebras for the real Banach function. Mathematics Subject. In this paper we solve a problem about the representation of all homomorphisms on a real function algebra as point evaluations and another two about function.

We explain the application of our result to various sorts of real finitely generated algebras of semialgebraic functions. The emphasis is on the.

An analogue of Nagasawa's theorem for real function algebras is proved. This reads as follows: Two real function algebras are isomorphic if and only if they are. This self-contained reference/text presents a thorough account of the theory of real function algebras. Employing the intrinsic approach, avoiding the.
